

Trackstar for Teachers – corral your hotlinks!

1. Go to the Trackstar website (<http://trackstar.4teachers.org>) and set up an account.
2. Login to your account, click Make New Track.

3. Enter Title and brief description of your track. Description and keywords help if you intend to make your track public for others to share.
4. Choose whether your track will be Resource list (links only, not annotated), Worksheet (links with questions to be answered by each link), Higher Thinking (annotated), or Demo (will be deleted after one week)
5. Choose Subject Area and Grade Level. If desired choose an expiration date, and if desired choose a password. Click Next.
6. With your TrackStar window still open, open an additional Internet Explorer window. (You can do this by double clicking Internet Explorer on your desktop).
7. Use this new window to browse to websites you want to add to your track. When you reach a website you want to use, just COPY its URL from the address bar, PASTE it into the URL field of one of the sites on your track, and fill in the appropriate information in the other fields. (Title, annotation or questions or directions to students how to use that site)

8. When you have finished adding links to your track, click SAVE. The message Updated Track and a track number will appear. Click return to Manage Tracks.

9. Now click your Track name, and choose the button 'View in Frames' to view your track. This is the URL you will give your students to access the track.
